OF THE

# OFFICERS AND CADETS

OF THE

# VIRGINIA MILITARY INSTITUTE,

LEXINGTON, VA.

JULY, 1854.

RICHMOND: MACFARLANE & FERGUSSON. 1854.

### REMARKS.

THE VIRGINIA MILITARY INSTITUTE was established, and is supported by the State of Virginia. An arsenal, containing 30,000 stand of arms, is located here, which was formerly guarded by a company of enlisted soldiers, at an annual expense of about \$6,000. In 1839, this appropriation was transferred to the support of a company of cadets, who, in addition to their duties as a guard, should also be placed under a course of instruction, upon the basis of the United States Military Academy, at West Point. Upon this new system the Institute has been in successful operation for twelve years. The cadets admitted consist of two classes. State and Pay cadets. The Institute supplies to the State cadet his board, tuition, fuel, lights, books, mattrass, medical attendance and stationery; and in consideration thereof, he is required to teach two years after graduation. The Pay cadet is at his own expense, which averages \$300 per year, for every charge, including clothing. The State cadets are selected from those who are unable to bear their own expenses. The Institution has always had as many pupils as its buildings would accommodate, and numbers thirty-two State and one hundred Pay cadets. Applications are made, by letter, to the Superintendent prior to the first of July, each year, and appointments are made for both classes of cadets, by the Board of Visitors, respect being had to their due apportionment among the several districts of the State.

The Literary Fund of the State contributes \$1,500 per year to the Institute for the education of teachers, and the State has received tuition fees from the pay cadets to the amount of \$25,000 since its organization, which sum is applied to the increase of the number of State cadets, and to the enlargement of the accommodations of the Institute.

### SYNOPSIS

OF THE

# COURSE OF STUDIES AT VIRGINIA MILITARY INSTITUTE.

STUDIES.	TEXT BOOKS.
Arithmetic. Algebra and Geometry. English Grammar. Geography. French.	Smith & Duke's American Statistical Arithmetic. Smith's Algebra, Legendre. Murray's Grammar. Mitchell. Levizac's Grammar, vie de Washington.
Trigonometry. Analytical Geometry. Descriptive Geometry. Shades, Shadows and Perspective. Surveying. Differential and Integral Calculus. French. Drawing, Landscape. Latin.	Lectures. Davies.
Natural Philosophy.  Red York Chemistry.  Latin.  Drawing, Topography and  Linear.	Bartlett and Gummere. Roger's Turner. Anthon's Cæsar, Virgil, Cicero, Horace & Terence.
Geology and Mineralogy. Military & Civil Engineering Tactics, Infantry & Artillery English Literature. Rhetoric and Logic. Geography. Agricultural Chemistry. Moral Philosophy and Const tutional Law.	Hitchcock and Norton.  Mahan and Lectures.  Scott. Chambers and Lectures. Blair and Whateley. Mitchell. W. Norton.  Paley and U. S. Constitution.

# EXPLANATION OF CONDUCT ROLL.

All Offences against Orders or Regulations are recorded.

These offences are divided into seven grades; each of which comprises offences of nearly the same degree of criminality.

The degree of criminality of offences of each grade is expressed by a number, as follows:

Offences	of	the	1st g	grade	by	10
Do	٤٤		2d	"		8
Do	66		3d			5
Do	4.6		4th	"		1
Do	"		5th	٤ د		3
Do	66		6th	6.6		2
Do	"		7th	"		1

For each year (after the first year) that a Cadet has been a member of the Institute, his offences are made to count more, by adding to the number expressing the degree of criminality, of each offence, one-sixth for the second class—and one-third for the third class—and one-half for the first class.

At the end of the Academic year, these numbers are added up, and the sum thus obtained is that found in the column of "demerit."

When a Cadet has more than 100 demerit by the 1st of January, or 200 in one year, he is dismissed ipso facto.

#### From Prof. P. Powers, late Professsor of University of Virginal

I have been using your Algebra for nearly twelve months, and can truly on the answers my purpose better than any other I am acquimted with. It proceed leading principles of the science is a concise and simple form, and especially the higher principles which give beginners most trouble, so that I have never had my classes master them before with so little difficulty.

#### From Prof. W. N. Pendleton.

The work which you have translated, I have, ever since becoming failer that, regarded it as a masterpiece in that department of mathematical in model my feelings respecting it have always partaken unch of the eithur in the bears the evident stamp of genius, and embodies more of the beauties of in the simplicity, and generalization, than any other work of that class of subjects with which my mathematical studies have made me acquainted.

#### From the Virginian, Winchester, Va.

A new Algebra, by Col. Francis H. Smith, the highly efficient and estimed Superintendent of our Military Institute at Lexington, will require no colory ours, in view of the rapid and entire success of the author's privious were, the Statistical Arithmetic. This work has all the prestige a city pullisher convert, and Virginians have thus all they demand before giving their encourage of the home productions. No Virginia school-boy will lose much by being minus Bennycastle and plus Smith.

#### - Notices of Smith's Biot's Analytical Geometry From Prof. John B. Strange, Norfolk Academy.

I have seen your Algebra, and, after a careful examination of it, I do not hitate to pronounce it an excellent work—the best on the subject that I have seen. I shall, therefore, adopt it immediately in the Academy. I am so much placed with all your mathematical works which have appeared, that I trust your lists in this department will not cease until you have completed the whole course.

# From A. W. Millspaugh, Principal of the Classical School, Farmville.

It gives the definitions and some of the most abstruse parts of the sawith greater clearness and perspiculty than any similar work with war h I acquainted—and I also think the copious examples given a great desider turn.

#### From Prof. Saunders, of William & Mary College.

I have long lamented the defect in logical arrangement of most of the printical treatises on the subject of Analytical Geometry, with regard to one of its at important applications—Conic Sections. The student is informed that they conic Sections, because they result from the intersection of a plane in distribution with the surface of a cone, but he is put in possession of their printies before any proof is given to him that they are what they are called. The very last step usually is, to show that they are Conic Sections. The Biot comes precisely up to my idea of the proper arrangement in the printing of the printi
